

Aesculap[®] AdTec[®] comBi

Bipolar combination instrument for laparoscopy
4 in One... grasping – dissecting – coagulating – cutting.

Aesculap Endoscopic Technology

Aesculap® AdTec® comBi

4 in One... grasping – dissecting – coagulating – cutting.

4inOne

AdTec® comBi is a combination instrument for laparoscopic surgery. It combines a **bipolar grasping forceps** with **mechanical scissors**.

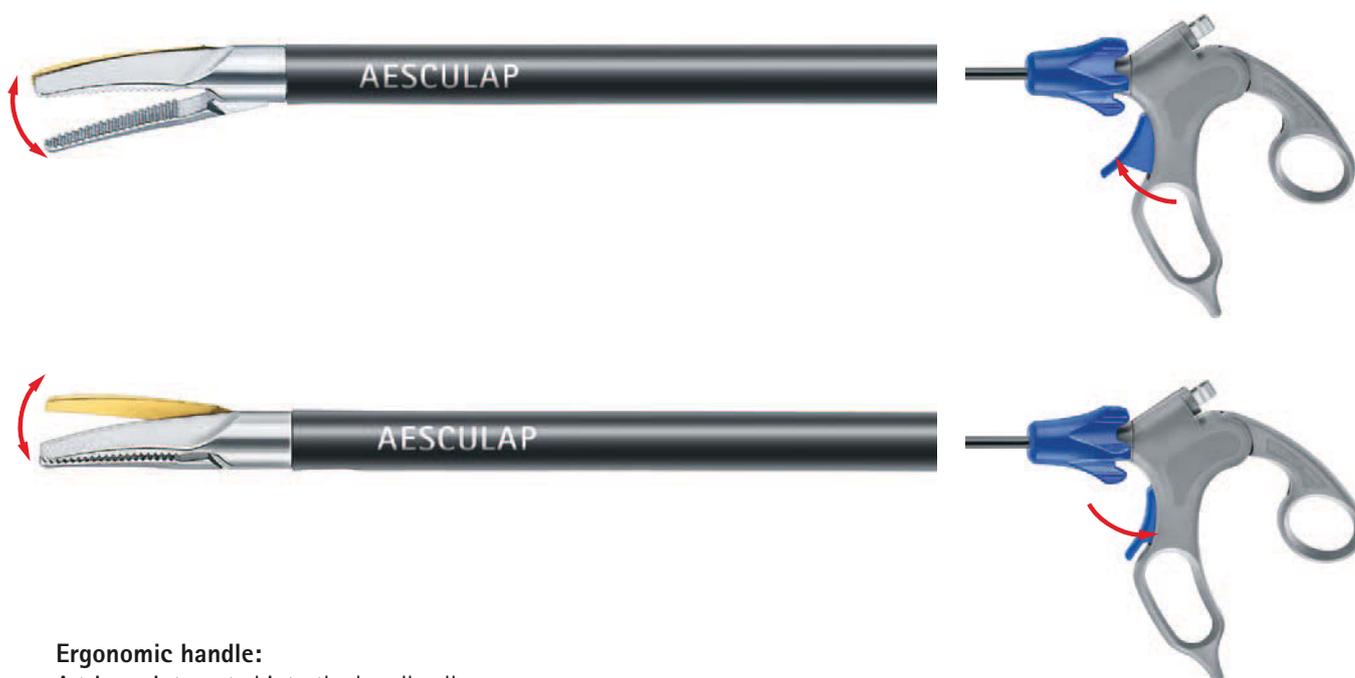

The integrated functions allow:

- precise dissection
- controlled grasping and manipulation of tissue
- a high level of dependability through bipolar coagulation
- effective mechanical cutting

Further advantages

- fine instrument tips for excellent overview
- colour coding for simple recognition of the active function (scissors or grasping forceps)
- "4 in 1" means comfort and efficiency: fewer instrument changes during operation and lower acquisition costs

Ergonomic handle:

A trigger integrated into the handle allows fast and easy switching from the grasping forceps to the scissors function.
