AESCULAP® Lyoplant®

INDICATIONS

Dura substitute in intracranial and intraspinal procedures

CONTRAINDICATIONS

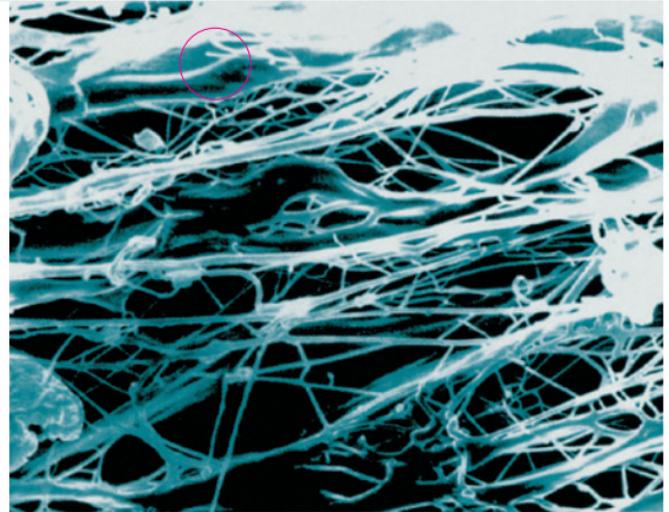

Lyoplant should not be used:

- In infected areas
- For substitution of mechanically strained connective tissue (tendons / sinews)
- For substitution of parts of the arterial system or the heart walls
- In case of known hypersensitivity against proteins of bovine origin

PRODUCT CHARACTERISTICS¹

- High liquid tightness of the implant prevents CSF leakages
- Tissue tolerant
- High tensile strength of the implant prevents suture pull out
- Good suturability
- Adaptable to anatomical structures

¹ Data on file, Aesculap AG.

DESCRIPTION

Lyoplant is a pure collagen implant that is produced from bovine pericardium. This highly purified collagen is known for its low propensity to cause immunological reactions.

A controlled lyophilisation (freeze drying) process supports that the loose fibre structure of Lyoplant is preserved to offer appropriate conditions for integration after implantation.
